## Our flexible floorplans and custom home designs allow you to live the way you want with Ownit Homes

What to expect on the journey to creating a custom home with Ownit Homes

### 01 | Design Consultation

The first step on your custom home journey is talking to one of our expert Consultants about your dream lifestyle so that they know exactly what you want in your home.

We can start by working off one of our existing plans and tailoring it to suit you, or you can bring plans from your architect or a rough sketch drawing that you have put together yourself. For more complex designs, we might ask you to come to a scoping meeting in our Head Office with our Drafting Manager to discuss expectations.

Your Consultant will visit your land and talk to you about your budget and the level of inclusions you would like in your home. There is no cost for this initial scoping process, however we may ask for an upfront deposit (subtracted from final contract value) for particularly complex designs.

### 02 | Preliminary Sketch Plan

Once you're happy with the concept design of your home, it will move on to the drafting stage where your plan will take shape and come to life with one of our experienced Draftspeople.

We'll work towards your requirements and draw up a sketch plan of your home showing the wall layout and position of the house on site. You will receive a copy of this plan for initial review, feedback and changes.

It's important that you take your time going through this plan in detail with your Building Consultant, as minimal changes will be allowed for at the next stage. Don't forget to ask plenty of questions along the way.

### 03 | Complete Sketch Plan

Once we receive your changes and feedback, we'll start to bring your home to life in more detail and complete the sketch plan. The layout, location and size of the rooms, windows, walls, doors and stairs all start to take shape.

This is also the stage you will see the façade of your home (sometimes referred to as elevations). This is the final stage of drawing your home before we order the engineering reports on your home, so it's important that all of your changes are made during this stage.

At this point we can provide costings and will finalise the price once you have confirmed everything you want in your new home.

### 04 | Final Plan Check and Engineering

When your sketch plan is complete and you have no more changes, we'll progress to drawing your final plan in detail.

At the same time we will order the final engineering assessment on your home. This report will assess the site you plan to build on and advise what type of slab or footings will be required to ensure your home is structurally sound.

Any minor plan amendments you require are needed within five (5) days of receiving your plans. We'll also be able to finalise your contract price at this stage.

### 05 | Contracts and Building Approval

Upon receipt of your signed contract, we'll submit your plan drawings to our Council Certifiers for Building Approval, and your dream home is well on its way!
